

## **SCOPE OF WORK**

### **System Verification & Issue Resolutions Services**

#### **1. Part-1: VM600Mk2 Rack &**

##### **Hardware Verification**

- Verification of Meggitt VM600Mk2 Rack Health
- Inspection of Installed Monitoring System Modules
- Verification of Rack Loading & Slot Configuration
- Inspection & Verification of Sensors Functionality & Performance on As Needed Basis
- Verification of Signal Loops & Sensor Outputs
- Identification of possible sensor or signal conditioning issues such as ground loops, cable faults etc.
- Verification & Validation of Alarm & Tripping Logics

#### **2. Part-2: VibroSight CMS**

##### **Configuration & Performance Verification**

- Verification of VibroSight capture Configuration
- Verification of CMS System Communication Interfaces
- Verification of Database Storage, Historian Functionality & Backup Configuration
- Verification of CMS Server Performance & Stability

#### **3. Part-3: Asset Surveillance**

##### **Management Services (ASMS)**

- Analyze Static & Dynamic Data from Vibrosight CMS Software
- Steady-State & Transient Data Analysis of Overall Vibration Signals (Direct, 1X, 2X, nX), gap voltages etc.
- Finetuning Of CMS Software for Machine Baseline Based on Industry Best Practices
- Vibration Analysis & Identification of Abnormal Machine Behaviour If Any
